

ABSTRACT

A clip for removably retaining a frame such as a canning screw band having a pair of arms with cutaways portion adjacent an outer surface of a canning screw band increasing
5 removability of the canning screw band from the clip. The clip has a pair of shoulders that coact to removably retain the canning screw band during use. The arms and shoulders are connected by a bridge portion spacing the shoulders such that they engage inner surfaces of the canning screw band during use. A clasp portion adjacent the bridge portion may be used for clasping another object between the bridge portion and the clasp portion. The clip may be used to attach a
10 piece of artwork framed within a canning screw band to a typical fashion belt or a plurality of clips may be linked together with a fabric shoe string to create a unique customizable fashion belt.
